```
For every Windows update history record, WinUpdatesView displays the following fields: Title, Description, Install Date, Update Operation (Install, Uninstall, Aborted), Category, Information URL, Support URL, Uninstall Notes, Client Application ID, Service ID,
 Update ID, Revision Number, Unmapped Result Code, Server Selection, hResult MultiMonitorTool v1.96 MultiMonitorTool is a small tool that allows you to do some actions related to working with multiple monitors. For every installed software, the following information is displayed: Display Name, Display Version, Install Date, Registry Time,
 Estimated Size, Install Location, Install Source, MSI Filename (In C:\Windows\Installer), and more... Password Security Scanner v1.61 This utility scans the passwords applications (Microsoft Outlook, Internet Explorer, Mozilla Firefox, and more...) and displays security information about all these passwords. This feature
 can be useful if you have Windows operating system with booting problems, and you want to disable the problems, and you want to disable the problems, and you want to disable the problems, and Flash (.swf) files. InstalledPackagesView v1.05
 InstalledPackagesView is a tool for Windows that displays the list of all software packages installed on your system with them. TableTextCompare can make the comparison even if the records of the 2 files are not sorted in the same order, or if the fields are not
 positioned in the same order. It also allows you to export the events list to text/csv/tab-delimited/html/xml file from the GUI and from command-line. You can select one or more network interface items and then export them to xml/html/csv/tab-delimited file, or copy them into the clipboard and then paste them into Excel or other spreadsheet
 application. This utility also allows you to remove the toolbar buttons that you previously added. You can also export the connected devices list into html/xml/csv/text file, or copy the list to the clipboard and then paste into Excel or other spreadsheet application. NetBScanner v1.11 NetBScanner is a network scanner tool that scans all computers in the
IP addresses range you choose, using NetBIOS protocol. NetworkCountersWatch also calculates and displays the current download speed on your network interface. HTMLAsText utility converts HTML documents to simple text files, by removing all HTML tags and formatting the text according to your
preferences. NetworkInterfacesView v1.21 NetworkInterfacesView is a simple tool that displays the list of all network adapters/interfaces installed on your system. FolderChangesView v2.32 FolderChangesView v2.32 FolderChangesView v2.32 FolderChangesView v3.32 FolderChan
 while the folder is being monitored. ChromeCookiesView v1.70 ChromeCookiesView is an alternative to the standard internal cookies viewer of Google Chrome Web browser. The LSA secrets key is located under HKEY_LOCAL_MACHINE\Security\Policy\Secrets and may contain your RAS/VPN passwords, Autologon password, and other system
 passwords/keys. You can also copy the URLs list into the clipboard and paste them into Excel or other spreadsheet application. For each folder, the following information is displayed: The date/time that you opened it, the entry number, display mode (Details, Icons, Tiles, and so on...), the last position of the window, and the last size of the window
 MZCookiesView v1.58 MZCookiesView is an alternative to the standard 'Cookie Manager' provided by Netscape and Mozilla browsers. ResourcesExtract v1.18 ResourcesExtract v1.18 ResourcesExtract is a small utility that scans dll/ocx/exe files and extract all resources (bitmaps, icons, cursors, AVI movies, HTML files, and more...) stored in them into the folder that you
 specify. You can use this tool for comparing 2 different snapshots of data, created by other NirSoft utilities, like DriverView, ServiWin, USBDeview, CurrPorts, WirelessNetView, ShellExView, and many others... You can use it to recover a lost password of your Internet connection or VPN. MessenPass v1.43 - Instant Messenger Password Recovery
 MessenPass is a password recovery tool that reveals the passwords of the following instant messenger (In Windows XP), Windows XP And Vista), Yahoo Messenger (Version 5.x/6.x), ICQ Lite 4.x/5.x/2003, AOL Instant Messenger, AIM 6.x, AIM Pro, Trillian, Miranda, and
 GAIM. For every recipient entry, the following information is displayed: Email Address, Display Name, Address books of Exchange or SMTP), Street Address, Phone Number, Created Time, Modified Time (Works only with address, Display Name, Address, Phone Number, Created Time, Modified Time (Works only with address, Display Name, Address, Display Name, Address, Display Name, Address, Display Name, Address Type (MS-Exchange or SMTP), Street Address, Display Name, Address Type (MS-Exchange or SMTP), Street Address, Display Name, Address Type (MS-Exchange or SMTP), Street Address, Display Name, Address Type (MS-Exchange or SMTP), Street Address, Display Name, Address Type (MS-Exchange or SMTP), Street Address, Display Name, Address Type (MS-Exchange or SMTP), Street Address Type (MS-Exchange or S
 from the history file or save them into text, HTML or XML file. CurrPorts also automatically mark with pink color suspicious TCP/UDP ports owned by unidentified applications (Applications without version information and icons) TcpLogView v1.35 
new log line every time that a TCP connection is opened or closed. For each application, the following information is displayed: Startup Type (Registry/Startup Folder), Command-Line String, Product Name, File Version, Company Name, Location in the Registry or file system, and more. RunAsDate v1.40 RunAsDate is a small utility that allows you to
run a program in the date and time that you specify. In addition, you can temporarily disable specific ActiveX components. For every window in the hierarchy, you can view its properties, like handle, class name, caption, size, position and more. This utility is especially useful for live cams Web sites, weather radar images, and satellite images.
 ShortcutsMan v1.10 ShortcutsMan displays the details about all shortcuts that you have on your desktop and under your start menu. ChromePass is a small password recovery tool that allows you to view the user names and passwords stored by Google Chrome Web browser. The packets statistics is grouped by the Ethernet Type,
IP Protocol, Source/Destination Addresses, and Source/Destination ports. It also allows you to easily uninstall a software on your local computer and remote computer and remote computer (Including quiet uninstall if the installer supports it). WhatInStartup also supports a special "Permanent Disabling" feature - If a program that you previously disabled added itself again
to the startup list of Windows, WhatInStartup will automatically detect the change and disable it again. Dialupass also allows you to save the dialup/VPN list into text/html/csv/xml file, or copy it to the clipboard. GACView v1.11 GACView v1.11 GACView v1.12 GACView v1.11 GACView v1.06 DeviceIOView v1.06 DeviceIOVie
 allows you to watch the data transfer between a software or service and a device driver (DeviceIoControl calls). For each font, WinFontsView draws 5 samples of the font in different sizes, in order to allow you to easily find and choose the desired font that you need. It allows you to define a set of rules for determining when the wheel will be used for
 changing the sound volume. DownTester v1.30 - Internet Speed Test DownTester allows you to easily test your Internet download speed in multiple locations around the world. RouterPassView v1.90 Most modern routers allow you to backup the configuration of the router into a file, and then restore the configuration from the file when it's needed.
 TableTextCompare v1.20 TableTextCompare is a small utility that allows you to easily compare 2 tab-delimited (csv) files, and find out the difference between the 2 files. For every event that the computer connected to a wireless network or disconnected from it, the following information is displayed: The date/time that the event
 occurred, network name (SSID), profile name, network adapter name, BSSID of the router/Access Point, and more... When your computers are turned on, WakeMeOnLan allows you to scan your network, and collect the MAC addresses of all your computers, and save the computers list info a file. After finding the desired MAC address records, you can
 save them into text/xml/HTML/csv file or copy them to the clipboard and paste them into Excel or other applications. WebBrowserPassView v2.11 WebB
Opera. In order to decrypt the file, you have to provide your latest login password. NetRouteView also allows you to easily add new routes, as well as to remove or modify existing static routes from the event logs of
 Windows, including the event description. You can also select multiple MMC snap-ins and then open them in MMC application. For every computer or device that is connected to your network, the following information is displayed: IP address, MAC address, the company that manufactured the network card, and optionally the computer name. You can
 also save the list of all folder paths into text/html/xml file. Visual C++ Source code is included. Customize Explorer TurnFlash v2.10 (UI Version) TurnFlash is a small utility that allows you to eaily disable and enable the Macromedia Flash player component in Internet Explorer. BluetoothCL
v1.07 BluetoothCL is a small console application that dumps all current detected bluetooth devices into the standard output. NetworkUsageView v1.26 NetworkUsageView v1.26 NetworkUsageView v1.02 Remote Desktop PassView
is a small utility that reveals the password stored by Microsoft Remote Desktop Connection utility inside .rdp files. EncryptedRegView v1.05 EncryptedRegView v1
API). FileAccessErrorView v1.30 FileAccessErrorView v1.30 FileAccessErrorView is a diagnostic tool for Windows that displays information about errors occur while programs running on your system try to open/read/write/delete a file. InsideClipboard v1.20 Each time that you copy something into the clipboard for pasting it into another application, the copied data is saved into
 multiple formats. When a problem with a TCP connectProblemView adds a new entry with the following information: Process ID, Detected On (date/time), Local Port, Remote Port, 
delimited/xml/html file, or copy them to the clipboard and then paste them into Excel or other spreadsheet application. MobileFileSearch also allows you to activate the search from command-line and then export the result to a file, or copy the found files to the desired folder on your computer. In addition, CurrProcess allows you to do the following
 actions: Kill a process, Dump memory of process into a text file, Create HTML report containing information about a process with the list of all modules that it loads into memory, Save the list of all running processes into text or HTML file, and more. For every Facebook image, the following information is displayed: URL of the image, Web browser
 that was used to visit the page, image type, date/time of the image, visit time, image file size, and external URL (For images taken from another Web site). You can also use USBDeview on a remote computer, as long as you login to that computer with admin user. GDIView v1.26 GDIView is a unique tool that displays the list of GDI handles (brushes,
pens, fonts, bitmaps, and others) allocated by every process. You select one or more shortcuts, and then delete them, resolve them or save the shortcut's details to HTML/Text/XML file. It was developed in Visual Basic environment and requires the Visual Basic Runtime library. It also displays the version information of the application - Product Name
 Product Version, File Description, and Company Name. After the entire video file is downloaded and player. WirelessKeyView v2.22 WirelessKeyView recovers all wireless network keys (WEP/WPA) stored in your computer
 by the 'Wireless Zero Configuration' service of Windows XP and by the 'WLAN AutoConfig' service of Windows Vista. For every download URL, Web Page URL, Start Time, End Time, Download Duration, Download Size, Web Browser, and more... AppCompatibilityView v1.07
 AppCompatibilityView is a simple tool that displays the list of all programs that run with different compatibility settings, stored in the Registry under HKEY_CURRENT_USER\Software\Microsoft\Windows NT\CurrentVersion\AppCompatFlags\Layers and HKEY_LOCAL_MACHINE\Software\Microsoft\Windows NT\Current\Undersity and the AppCompatFlags\Layers and HKEY_LOCAL_MACHINE\Software\Microsoft\Windows NT\Current\Undersity and the AppCompatFlags\Layer\Undersity and the AppCompatFlags\Layer\Windows NT\Current\Undersity and the AppCompatFlags\Layer\Undersity and the AppCompatFlags\Layer\Windows NT\Current\Undersity and the AppCompatFlags\Layer\Undersity and the AppCompatFlags\Layer\Windows NT\Current\Undersity and the AppCompatFlags\Layer\Windows NT\
 NT\CurrentVersion\AppCompatFlags\Layers keys. PropertySystemView also allows you to set properties of Windows. This information includes the disk model/firmware/serial number, cylinders/heads, power-on hours (POH), internal temperature, disk errors rate, and more. It displays the total count for each type of GDI handle, as well as detailed
 information about each handle. OperaCacheView v1.40 OperaCacheView is a small utility that reads the cache folder of Opera Web browsers (Internet Explorer, Mozilla
 Firefox, Google Chrome, and Safari) and displays the browsing history of all these Web browsers in one table. For example, You can use DriverView utility to save 2 snapshots of loaded drivers list into a tab-delimited file, and then use TableTextCompare to easily find out which device drivers were added, removed, or changed since the time that the
 first snapshot was taken. In some circumstances, you may need to fix or modify the values appeared in the AutoComplete list, or you may want to remove unwanted email addresses and/or to add new email addresses and/or to add new email addresses. LastActivityView v1.35 LastActivityView is a tool for Windows operating system that collects information from various sources on a
 running system, and displays a log of actions made by the user and events occurred on this computer. MultiMonitorTool also provides a preview window, which allows you to watch a preview of every monitor on your system. You can select one or more items and then save them into text/html/xml file or copy them to the clipboard. It displays the
 number of read/write bytes, the number of read/write operations, current calculated read/write speed, and the details about the application (product name, product version, and so on) that makes the file read/write operations. By using a few command-line options, you can also instruct AltStreamDump to displays the alternate streams list of other
 folders and to scan subfolders in the desired folder depth NTFS file system in order to make changes in the folders structure of Windows Vista, Microsoft uses symbolic links and junction points of NTFS file system in order to make changes in the folders structure of Windows Vista, Microsoft uses symbolic links and junction points of NTFS file system in order to make changes in the folders structure of Windows Vista, Microsoft uses symbolic links and junction points of NTFS file system in order to make changes in the folders structure of Windows Vista, Microsoft uses symbolic links and junction points of NTFS file system in order to make changes in the folders structure of Windows Vista, Microsoft uses symbolic links and junction points of NTFS file system in order to make changes in the folders structure of Windows Vista, Microsoft uses symbolic links and junction points of NTFS file system in order to make changes in the folders structure of Windows Vista, Microsoft uses symbolic links and junction points of NTFS file system in order to make changes in the folders structure of Windows Vista, Microsoft uses symbolic links and junction points of NTFS file system in order to make changes in the folders structure of Windows Vista, Microsoft uses symbolic links and junction points of NTFS file system in order to make changes in the folders structure of the file symbol of the file s
 AltStreamDump is a console application (Command Prompt) that dumps the list of NTFS alternate streams found in the current directory. You can use it to decrypt the Windows Vault data stored on external hard drive. MS-Outlook doesn't provide any ability to edit this
 AutoComplete list, so this is where NK2Edit software can help you. You can modify the monitor settings from the GUI and from command-line. JavaScript Animator Express v1.10 This utility allows you to easily create animation from image files (GIFs and JPGs) on your local drive. SafariCacheView also allows you to select one or more cache items and
 then extract them into the desired folder or save the cache list into html/text/xml/csv file. Optionally, you can also close one or more opened files, or close the process that opened these files. The UserAssist key contains information about the exe files and links that you open frequently. After you made a search, you can select one or more files, and
 save the list into text/html/csv/xml file, or copy the list to the clipboard. URLStringGrabber v1.11 URLStringGrabber is a small utility that scans all opened windows of Internet Explorer and grab the URLs stored in them, including clickable links, images, script files, CSS files, RSS feeds, and flash (.swf) files. The information in the Prefetch file is used
 for optimizing the loading time of the application in the next time that you run it. WinsockServicesView also allows you to easily disable/enable a Winsock service provider. TimeZonesView v1.06 TimeZonesView is a simple tool for Windows that displays all world time zones. BluetoothLogView also allows you to specify a description for every device
(according to its MAC address) that will appear under the 'Description' column. SecuritySoftView v1.00 SecuritySoftView is a simple tool that displays the AntiVirus, AntiSpyware, and Firewall programs that are currently installed on your system and registered with the security center of Windows operating system. Source code is included ExeInfo
v1.01 The ExeInfo utility shows general information about executable files (*.exe), dynamic-link libraries (*.dll), ocx files, and drivers files (COM registration). For every computer located by this NetBIOS scanner, the following information is displayed
 IP Address, Computer Name, Workgroup or Domain, MAC Address, and the company that manufactured the network adapter (determined according to the MAC address). You can view the entire (and very large!) list of ActiveX components by loading it from HKEY_CLASSES_ROOT\CLSID Registry key, or alternatively, display only the ActiveX
 components that you specify. BrowserAddonsView can scan and detect the addons of most popular Web browsers: Chrome, Firefox, and Internet Explorer. WinLister v1.22 This utility displays the list of opened windows on your system. USBDriveLog v1.10 USBDriveLog v1.10
 computer. You can save the weather report into a text or HTML files. It displays network interfaces that are currently active, as well as network interfaces that have been installed previously, and now they are not connected (like USB wireless network adapters). RTMP is a streaming protocol used by Hulu, justin.tv, and by many live streaming Web
 sites. OutlookAttachView v3.44 OutlookAttachView v2.36 OutlookAddressBookView is a simple utility that displays the details of all recipients stored in the address books of Microsoft Outlook. For each cache file, the following
 information is displayed: URL, Content type, File size, Last accessed time, and last modified time in the server. UserAssist view v1.02 This utility decrypt and displays the list of all UserAssist view v1.02 This utility decrypt and displays the list of all UserAssist view v1.02 This utility decrypt and displays the list of all UserAssist view v1.02 This utility decrypt and displays the list of all UserAssist view v1.02 This utility decrypt and displays the list of all UserAssist view v1.02 This utility decrypt and displays the list of all UserAssist view v1.02 This utility decrypt and displays the list of all UserAssist view v1.02 This utility decrypt and displays the list of all UserAssist view v1.02 This utility decrypt v1.02 This utility decrypt v1.02 This utility decrypt v1.02 This utility decrypt v1.02 This utility v1.02 This utili
 HashMyFiles is small utility that allows you to calculate the MD5 and SHA1 hashes of one or more files in your system. AddrView extracts URLs of images (tag), links to other files (tag), CSS files, frames, Flash files, and more. DiskSmartView v1.21 DiskSmartView is a small utility that retrieves the S.M.A.R.T information (S.M.A.R.T = Self-
 Monitoring, Analysis, and Reporting Technology) from IDE disks. You can easily export the DNS queries information to csv/tab-delimited/xml/html file, or copy the DNS queries to the clipboard, and then paste them into Excel or other spreadsheet application. WirelessNetConsole v1.00 WirelessNetConsole is a small console application that dumps all
 current detected wireless networks information into the standard output. The system counters include the number of incoming/outgoing bytes, number of incomi
 with exactly the same syntax. MyLastSearch v1.65 MyLastSearch utility scans the cache and history files of your Web browser, and locate all search engines (Google, Yahoo and MSN). In addition, you can easily hide, show or close the selected windows, or save the windows list to text or HTML file
 This tool displays your current audio settings of every application on your system, and allows you to easily change the setting of multiple applications at once. This tool can be useful for developers that need to trace GDI resources leak in their software. CredentialsFileView v1.11 CredentialsFileView is a simple tool for Windows that decrypts and
displays the passwords and other data stored inside Credentials files of Windows. WinMailPassRec v1.00 WinMailPass
 items, and them export them into html/xml/csv/text file, or copy the information to the clipboard and paste it into Excel. WhatIsHang v1.27 Sometimes, a Windows software hangs, the user interface doesn't respond anymore, and you cannot find out what is cause of the problem. ExtPassword! v1.00 ExtPassword! is tool for Windows that allows you to
 recover passwords stored on external drive plugged to your computer. OpenWithView v1.11 O
 and commands to run in the near future. The crash report of WinCrashReport is displayed as simple text or in HTML, and includes the following information: Crash memory address, Exception description, Strings found in the stack, processor registers, modules list, threads list, and more... For every time zone, the following
 information is displayed: name, description, current date/time in this time zone and date/time that daylight saving time begins and ends. LiveContactsView v1.26 LiveContactsView v1.26
 xml/html/text/csv file or copy the downloads information to the clipboard and paste it into Excel or other spreadsheet application. For every account, the following information is displayed: Account Creation Time, Last Used Time, Last Sync
 Attempt Time, Last Sync Success Time. OfficeIns v1.20 - Microsoft Office Add-Ins Manager OfficeIns is a small utility that displays the details of all installed Microsoft Office add-ins on your computer, and allows you to disable/enable them. SearchMyFiles v3.17 SearchMyFiles is an alternative to the standard "Search For Files And Folders" module of
 Windows. Some of the names are saved into the 'Recent' folder. You can also save the ping result into text/html/xml file, or copy it to the clipboard. This utility is the console version of LSASecretsView. This feature is known as 'AutoComplete' and Outlook automatically build this emails list according to user activity and save it into a file with .NK2
 extension. You can use SiteShoter in user interface mode, or alternatively, you can run SiteShoter in command-line mode without displaying any user interface. WinFontsView v1.10 WinFontsView v1.36
 EventLogChannelsView is a simple tool for Windows 10/8/7/Vista that shows the list of all event log channels on your system, including the channel name, event log filename, enabled/disabled status, current number of events in the channel name, event log filename, enabled/disabled status, current number of events in the channel name, event log filename, enabled/disabled status, current number of events in the channel name, event log filename, enabled/disabled status, current number of events in the channel name, event log filename, enabled/disabled status, current number of events in the channel name, event log filename, event log filename
 and so on), Query Status (Error or succeeded), Query Timestamp, ID and name of the process that requested the DNS lookup. For every cookie, the following information is displayed: Host Name, Value, Secure (Yes/No), HTTP Only Cookie (Yes/No), Last Accessed Time, Creation Time, Expiration Time. It supports both
generic domains and country code domains. You can also capture a single camera image from command-line, without displaying any user interface. This tool can be useful for developers that need to trace memory leaks in their software. You can easily save the cache information into text/html/xml file, or copy the cache table to the clipboard and then
 paste it to another application, like Excel or OpenOffice Spreadsheet. IconsExtract v1.47 Extract icons and cursors from EXE, DLL, CPL, and OCX files and save them as ICO or CUR files. You can use this utility to recover lost Web/FTP/Email passwords. You can also get the EDID records of a remote computer, if you login to this computer with
 administrator rights. For every cached image file, the following information is displayed: URL of the image, Web browser that was used to visit the page, image type, date/time of the image, browsing time, and file size. IECacheView v1.58 - Internet Explorer Cache Viewer IECacheView is a small utility that reads the cache folder of Internet Explorer
and displays the list of all files currently stored in the cache. With HtmlDocEdit you can change the font/color of selected text, add images, add links, add ordered and unordered lists, and more... Mail PassView v1.92 - Email Password Recovery R
 Express, Microsoft Outlook 2000 (POP3/SMTP Accounts only), Microsoft Outlook 2002/2003/2007/2010/2013/2016, Windows Mail, IncrediMail, Eudora, Netscape Mail, Mozilla Thunderbird, PstPassword v1.20 PstPassword is a small utility that recover lost password of Outlook 2002/2003/2007/2010/2013/2016, WinUpdatesList v1.33 WinUpdatesList
 displays the list of all Windows updates (Service Packs and Hotfixes) installed on your local computer. You can read the cookies from the current running system or from the WebCacheV01.dat database on external hard drive. OpenSaveFilesView v1.15 
standard open/save dialog-box of Windows. SafariCacheView v1.11 SafariCacheView is a simple utility for Windows that reads and parses the cache file of Safari Web browser (cache.db) and displays the list of all cached files in a simple utility for Windows that reads and parses the cache file of Safari Web browser (cache.db) and displays the
information stored in them. SimpleWMIView v1.51 SimpleWMIView v1.51 SimpleWMIView is a simple tool for Windows that displays the result of WMI queries in a simple table, and allows you to easily export the data to text/csv/tab-delimited/html/xml file, or to copy the selected items to the clipboard and then paste them to Excel or other spreadsheet application. You can
 also export all settings of your monitor into a configuration file and then later load the same configuration back into your monitor. TurnedOnTimesView v1.46 TurnedOnTimesView is a simple tool that analyses the event log of Windows operating system, and detects the time ranges that your computer was turned on. Read More >>
WebCookiesSniffer v1.30 WebCookiesSniffer is a packet sniffer tool that captures all Web site cookies sent between the Web browser and the Web server and displays them in a simple cookies table. c# source code is available. You can view the detected threats log on your local computer, on remote computers on your network, and on external disk
 plugged to your computer. After you made your changes, you can easily switch back to non-design mode and/or save the modified Web page to HTML file. For each registered file, you can view the last date/time that it was registered, and the list of all registration entries (CLSID/ProgID). For every download record, the following information is
displayed: Download URL, Download Filename (with full path), Referrer, MIME Type, File Size, Start/End Time, Download Duration, and Average Download Speed. IECookiesView v1.79 This utility displays the details of all cookies that Internet Explorer stores on your computer. You can easily select one or more passwords in the OperaPassView
 window, and then copy the passwords list to the clipboard and save it into text/html/csv/xml file. You can also save the files list into text/html/csv/xml file. DLL Export Viewer v1.66 This utility displays the list of all exported functions and their virtual memory addresses for the specified DLL files. JumpListsView v1.16 JumpListsView is a simple tool that
displays the information stored by the 'Jump Lists' feature of Windows 7 and Windows 8. ChromeHistoryView is a small utility that reads the history data file of Google Chrome Web browser, and displays the list of all visited Web pages in the last days. DevManView v1.76 DevManView is an alternative to the standard Device
 Manager of Windows, which displays all devices and their properties in flat table, instead of tree viewer. In addition, you are allowed to view the visited URL list on a remote computer, and even access the history folder. The free space log information to access the visited URL list on a remote computer, and even access the visited URL list of other user profiles on your computer, and even access the visited URL list of other user profiles on your computer, and even access the visited URL list of other user profiles on your computer, and even access the visited URL list of other user profiles on your computer, and even access the visited URL list of other user profiles on your computer, and even access the visited URL list of other user profiles on your computer, and even access the visited URL list of other user profiles on your computer, and even access the visited URL list of other user profiles on your computer, and even access the visited URL list of other user profiles on your computer, and even access the visited URL list of other user profiles on your computer, and even access the visited URL list of other user profiles on your computer, and even access the visited URL list of other user profiles on your computer.
 is taken from the following event log channel: Microsoft-Windows-Ntfs/Operational FreeSpaceLogView allows you to get the disk free space information from your network, and from external hard drive plugged to your computer. For every period of time that the computer was turned on, the following
 information is displayed: Startup Time, Shutdown Type, Shutdown Ty
 files created by the Windows Error Reporting (WER) component of the operating system every time that a crash is occurred. GACView also allows you to delete an assembly the cannot be uninstalled in the regular way. It also allows you to delete an assembly the cannot be uninstalled in the regular way. It also allows you to delete an assembly the cannot be uninstalled in the regular way. It also allows you to delete an assembly the cannot be uninstalled in the regular way. It also allows you to delete an assembly the cannot be uninstalled in the regular way.
device that is not plugged. When application crashes in your system and Windows displays the internal crash window of the operating system, you can run WinCrashReport, and get extensive report about the crashed application. SysExporter v1.77 SysE
from almost any application running on your system, and export it to text, HTML or XML file. When you select a wireless network in the upper pane of this tool, the lower pane displays the Wi-Fi information elements received from this device, in hexadecimal format. You can do these actions from the user interface or from command-line, without
displaying user interface. HeapMemView v1.05 HeapMemView v1.05 HeapMemView v1.05 HeapMemView is a small utility that allows you to view the content of all memory blocks allocated in the heap of the process that you select. For every USB drive event, the following information is displayed: Device Model, Revision, Manufacturer, Serial Number, Plug Time, Device ID,
Device Capacity, and more... (Each connection on different network adapter) It also displays extensive information about every active network/Internet connection, including network adapter name, MAC Address, Name Servers, MTU, Interface Speed, current incoming/outgoing data speed, number of received/sent packets, received/sent bytes, and
more... You can export the entire Registry file, or only a specific Registry key. MadPassExt v1.00 This tool allows you to decrypt and extract the secret DPAPI password generated for your Microsoft account when using it to log into Windows 10 or Windows 11. The backup file of the router usually contains important data like your ISP user
name/password, the login password of the router, and wireless network keys. SpecialFoldersView v1.26 Windows operating system have dozens of special folders that are used for storing application settings and files, storing line, the following information is
displayed: Filename, Detect Time, Threat Name, Severity, Category, Detection User, Action, Origin, and more... NetworkConnectLog v1.13 NetworkConnectLog v1.13 NetworkConnectLog v1.13 NetworkConnectLog v1.14 NetworkConnectLog v1.15 NetworkConnectLog v1.15 NetworkConnectLog v1.16 NetworkConnectLog v1.16 NetworkConnectLog v1.16 NetworkConnectLog v1.17 NetworkConnectLog v1.18 NetworkConnectLog v1.18 NetworkConnectLog v1.19 NetworkConnectL
 and when a computer or device disconnects from your network. WirelessConnectionInfo v1.16 WirelessConnectionInfo is a simple tool for Windows Vista/7/8/2008/10 that displays general information and statistics about the active wifi connection, including the SSID, BSSID, PHY Type, Signal Quality, Receiving rate, Transmission Rate, Authentication
Algorithm, Channel Number, Total number of transmitted/received frames, and more... CredHistView v1.00 Every time that you change the login password in the CREDHist file (Located in %appdata%\Microsoft\Protect\CREDHIST) This tool allows you to decrypt the CREDHist file
 and view the SHA1 and NTLM hashes of all previous passwords you used on your system. When selecting a cookie string in the upper pane, WebCookiesSniffer parses the cookie string in the upper pane, WebCookiesSniffer parses the cookie string and displays the cookies as name-value format in the lower pane. After retrieving your lost passwords, you can save them into text/html/csv/xml file, by using the 'Save
 Selected Items' option (Ctrl+S). NetworkLatencyView also allows you to easily export the latency information to text/csv/tab-delimited/html/xml file, or copy the information to text/csv/tab-delimited/html/xml file, or copy the information to the clipboard and then paste it to Excel or other application. The upper pane of WebCookiesSniffer displays the cookie string and the Web site/host name that sent or received
 this cookie. For every Winsock service, the following information is displayed: Display Name, Status (Enabled/Disabled), DLL Type (32-bit or 64-bit), DLL Type (32-bit or 64-bit), DLL Filename, DLL Description/Version, and Created/Modified Time. AddrView v1.01 A
decode METAR reports from a text file, or download the latest reports directly from the Internet. For every Windows app, the following information is displayed: App Name, Registry Modified Time, Install Folder, Install Folder Owner, Uninstall Command, and more... It allows you to easily disable or enable any
Codec/DirectShow component or export the list into text/xml/html file. MMCSnapInsView v1.00 MMCSnapInsView v1.00 MMCSnapInsView v1.00 MMCSnapInsView v1.00 mane, description, CLSID, dll file, product name, company name, file version, and more... It automatically creates hidden
 window of Internet Explorer, loads the desired Web page, and than save the entire content of the Web page into an image file (.png, .jpg, .tiff, .bmp or .gif). EdgeCookiesView v1.17 EdgeCookiesView 
 Windows 10). For each window, some useful information is displayed: the title, the handle of window, location, size, class name, process number, the name of the Registry file is corrupted and cannot be loaded by Windows
RegScanner v2.70 RegScanner is a small utility that allows you to scan the Registry, find the desired Registry values that match to the specified search criteria, and display them in one list. InstalledAppView allows you to load the Windows 10 apps list from your local system, remote computer on your network and from external disk plugged to your
computer. It supports the new Internet Explorer 7.0-11.0, as well as older versions of Internet explorer, v4.0 - v6.0 PasswordFox v1.70 Pa
or their name (using wildcard). For every log item, the following information is displayed: Log Time, Volume Guid, Lowest Free Space, Is Boot Volume (Yes/No). URLProtocolView v1.15 URLProtocolView v
on your system. HandleCountersView v1.15 HandleCountersView is a simple tool for Windows that shows the current number of handles (File, Directory, Token, Job, Thread, and so on...) opened by every process running on your system and the change in number of handles (File, Directory, Token, Job, Thread, and so on...)
utility that displays the binary content of all formats that are currently stored in the clipboard, and allow you to save the content of specific format into a binary file. It displays the list of all keyboard keys. It allows you to easily copy the cached video
files into another folder for playing/watching them in the future. LSASecretsDump v1.21 LSASecretsDump is a small console window. You can also save the list of attachments into xml/html/text/csv file. This tool might be useful if, for example,
you backup a cluster of folders and then restore them into another disk, but the backup program doesn't restore the original modified time of the folders. Search Filter View v1.00 When you search the content of files with Windows search, it uses the right search Filter View v1.00 When you search the original modified time of the folders.
 the lower pane displays the following information: Strings found in the stack, and processor registers. You can easily export this information into csv/tab-delimited/xml/html file or copy it to the clipboard and then paste into Excel or other software. CountryTraceRoute v1.32 CountryTraceRoute is a Traceroute
 utility, similar to the tracert tool of Windows, but with graphical user interface, and it's also much faster than tracert of Windows. For each opened file, additional information is displayed: handle value, read/write/delete access, file position, the process that opened file, additional information is displayed: handle value, read/write/delete access, file position, the process that opened file, additional information is displayed: handle value, read/write/delete access, file position, the process that opened file, additional information is displayed: handle value, read/write/delete access, file position, the process that opened file, additional information is displayed: handle value, read/write/delete access, file position, the process that opened file, additional information is displayed: handle value, read/write/delete access, file position, the process that opened file, additional information is displayed: handle value, read/write/delete access, file position, the process that opened file, additional information is displayed: handle value, read/write/delete access, file position, the process that opened file, additional information is displayed.
SSID, MAC Address, Device Manufacturer, PHY Type, Channel, RSSI, Security, Beacons Count, Probe Responses Count, Data Bytes, and more... WifiInfoView also has a summary mode, which displays a summary mode and summar
type, or the maximum speed. For every file, FileActivityWatch displays the number of read/write bytes, number of read/write timestamp, and the name/ID of the process responsible for the file operation. For each USB device, extended information is displayed: Device name/description, device type, serial
number (for mass storage devices), the date/time that device was added, VendorID, ProductID, and more... It displays the details of all cookies stored inside the cookies, and backup/restore the cookies file. BluetoothLogView
v1.12 BluetoothLogView is a small utility that monitors the activity of Bluetooth devices around you, and displays a log of Bluetooth devices on the main window. If the driver is currently running on Windows kernel, the following information is also displayed: Base Memory Address, Memory Size, and Load Count.
ManageWirelessNetworks also allows you to edit a single profile with the standard editor of Windows, edit the XML of the wireless profile (For advanced users only!), quickly switch between manual and automatic mode, quickly switch between the profile position up and
 down, copy multiple wireless profiles to another wireless card on your system, and more... GetNir v1.01 GetNir is a command-line tool for Windows that receives tab-delimited or comma-delimited or command-line tool for Windows that receives tab-delimited or command-line tool for Windows table t
 names, and then sends these values to the Standard output (stdout). However, WhatIsHang also displays a list of strings and dll files related to the hang problem. WifiInfoView v2.76 WifiInfoView v2.76 WifiInfoView scans the wireless networks in your area and displays
 extensive information about them, including: Network Name (SSID), MAC Address, PHY Type (802.11g or 802.11n), RSSI, Signal Quality, Frequency, Channel Number, Maximum Speed, Company Name, Router Model and Router Name (Only for routers that provides this information), and more... After revealing the passwords, you can easily copy
 them to the clipboard or save them into text/html/csv/xml file. You can easily select one or more items from the cache list, and then extract the files to another folder, or copy the URLs list to the clipboard. TCPConnectProblemView also allows you to automatically close any TCP socket with no response from the server, in order to decrease the time
you wait for any software to display an error message (IPv4 only). IPNeighborsView v1.01 IPNeighborsView v1.01 IPNeighborsView v1.01 IPNeighborsView v4.01 IPNeighborsView v4.01 IPNeighborsView v5.01 IPNeighborsView v6.01 IPNeighborsView v7.01 IPNeighborsView v7.01
 WebSiteSniffer v1.51 WebSiteSniffer is a packet sniffer tool that captures all Web site files downloaded by your Web browser while browsing the Internet, and stores them on your hard drive under the base folder that you choose. For each created socket, the following information is displayed: socket handle, socket type, local and remote addresses,
local and remote ports, total number of send/receive bytes, and more. For every key, the following information is displayed: Key Name (VK XXXX), Description, Key Code (Decimal), Key Pressed Status, Key Toggled Status, Key Togg
ControlMyMonitor allows you view and modify the settings of your monitor (Also known as 'VCP Features'), like brightness, contrast, sharpness, red/green/blue color balance, and more... RegFileExport read the Registry file, ananlyze it, and then export the Registry data into a standard .reg file of Windows. After the debugging events are
 accumulated, you can easily export them into comma-delimited/xml/html file or copy them to the clipboard and then paste them into Excel or any other spreadsheet application. Also, with MyEventViewer you can easily select multiple event items and then save them to the clipboard (Ctrl+C) and then
paste them into Excel. DotNetResourcesExtract v1.01 DotNetResourcesExtract is a small utility that scan dll/exe files of .NET applications, and extract all .NET embedded resources (Bitmaps, Gifs, HTML files, and so on) stored in them into the folder that you specify. You can use the default DNS server of your Internet connection, or use any other
DNS server that you specify. PropertySystemView v1.18 PropertySystemView is a tool that allows you view and modify the properties of file from GUI and command-line, using the property system View v1.18 PropertySystemView v1.18 Property system. This utility display the list of all recently opened files, and allows you to delete unwanted filename entries. FileTypesMan
v1.96 FileTypesMan is an alternative to the 'File Types' tab in the 'Folder Options' of Windows. In addition, CurrPorts allows you to close unwanted TCP connections, kill the process that opened the ports, and save the TCP/UDP ports information to HTML file, or to tab-delimited text file. It also allows you export the cookies into
text/csv/html/xml file. InjectedDLL v1.00 InjectedDLL v1.00 InjectedDLL is a small utility that displays the list of DLLs that are automatically injected on every process in your system. After collecting the connected computers/devices information, you can easily export the list to tab-delimited/comma-delimited/xml/html file. For every device driver, the following
information is displayed: Driver Name, Display Name, Description, Startup Type, Driver Group, Filename, File Size, Modified/Created Time of the driver file, and version information of the driver file, and the mute/unmute state of all
 sound components, as well as the default sound devices, and then later, load the same filename to restore exactly the same volume levels and settings. For every bookmark, the following information is displayed: Title, URL, Folder Name, Folder Path, Position, Created Time, Modified Time (Only Firefox), ID, Guid, Web Browser, and Bookmarks File
You can use this tool to determine whether the passwords used by other users are secured enough, without watching the passwords themselves. WhatInStartup v1.35 This utility displays the list of all applications that are loaded automatically when Windows starts up. You can use it to get installed programs information for your local system, for
remote computer on your network, and for external hard-drive plugged to your computer. For Chrome and Firefox, BrowserAddonsView detects and scans all Web browser profiles if there are multiple profiles. For each password entry, the following information is displayed: Record Index, Web Site, User Name, Password, User Name Field, Password
Field, and the Signons filename. SniffPass v1.13 - Password SniffPass v1.13
system and displays an alert when a software tries to initiate a TCP connection and there is no response from the server. IEDesignMode v1.00 IEDes
 pane, you can view the details of the device drivers loaded during the crash in the lower pane. ProcessThreadsView v1.29 
 current text, paste a new text into the Web page, and so on. WakeMeOnLan also allows you to turn on a computer from command-line, by specifying the computer name, IP address, or the MAC address of the remote network card. Dialupass v3.61 - Dialup Password Recovery This utility enumerates all dialup/VPN entries on your computers, and
displays their logon details: User Name, Password, and Domain. The browsing history table includes the following information: Visit Time, 
 Signal Quality in %, PHY types, RSSI, MAC Address, Channel Frequency, and more. It allows you to easily disable or delete unwanted programs that run in your Favorites/Bookmarks or find specific item by specifying the URL or the title. WinPrefetchView v1.37
Each time that you run an application in your system, a Prefetch file which contains information line includes the following information: Filename, Content Type, URL, Content Length, Server Name, Server Time, Expiration Time, Last Modified
Time, Content Encoding, and Referrer. USBDeview also allows you to uninstall USB devices that you previously used, and disconnect USB devices that are currently connected to your computer.
 BulkFileChanger v1.72 BulkFileChanger is a small utility that allows you to create files list from multiple folders, and then make some action on them - Modify their created/modified/accessed time, change their file attribute (Read Only, Hidden, System), run an executable with these files as parameter, and copy/cut paste into Explorer. For every
 process, this tool displays the total number of TCP connections, number of IPv6 TCP connection
open a Web page containing RTMP video stream in your favorite Web browser, and while watching the video, it'll be saved to your disk automatically as .flv or .mp4 file. DataProtectionDecryptor v1.11 DataProtectionDecryptor is a powerful tool for Windows that allows you to decrypt passwords and other information encrypted by the DPAPI (Data
 Protection API) system of Windows operating system. It moves to the next download URL after the specified amount of KB - just according to your preferences. You can simply copy the message headers from your email software and paste them into IPNetInfo utility.
 FoldersReport v1.21 The FoldersReport utility scans a drive or a base folder that you select, and displays essential information for each folder, number of hidden files, number of compressed files, and number of subfolders. There is also
 extensive command-line support, which allows you to save/load profiles, change current volume of every sound component, and mute/unmute every sound component, without displaying any user interface. In addition, it allows you to change the conkies into a readable text file, find cookies
by specifying the domain name, view the cookies of other users and in other computers, and more... When ActiveX components are disabled, they cannot be used by any software, until you enable them again. FolderTimeUpdate v1.65 FolderTimeUpdate is a simple tool for Windows that scans all files and folders under the base folder you choose, and
updates the 'Modified Time' of every folder according the latest modified time of the files stored in it. You can view this information for your current running operating system, or for another operating system, or for another operating system, or for another operating system of the files stored in it. You can view this information for your current running operating system, or for another operating system, or for another operating system, or for another operating system.
 wireless network and displays the list of all computers and devices that are currently connected to your network. The displayed battery information includes the battery capacity, full charged capacity, voltage, charge/discharge rate, and
 more... You can also watch the content of each send or receive call, in Ascii mode or as Hex Dump. For every account, the following information is displayed: Account Name, Display Name, Email, User Name, Password, Profile Name, Server Address, Server Type, Server Port, Registry Key, Windows User, and PST files used for this account
 SecurityQuestionsView displays the security questions of all users on your system that chose to set their security questions, for every user there are usually 3 questions of incoming/outgoing calls, chat messages, and file transfers made by the
specified Skype account. ZipInstaller v1.21 The ZipInstaller utility installs and uninstalls applications and utilities that do not provide an internal installation program. FBCacheView v1.22 FBCacheView is a simple tool that scans the cache of your Web browser (Internet Explorer, Firefox, or Chrome), and lists all images displayed in Facebook pages
that you previously visited, including profile pictures, images uploaded to Facebook, and images taken from other Web sites. For every application, the following information is displayed: the number of sent/received IPv6 bytes.
DNSQuerySniffer v1.85 DNSQuerySniffer v1.85 DNSQuerySniffer is a network sniffer utility that shows the DNS queries sent on your system. When scanning the product keys by using WMI. Other are saved into the Registry. ProcessActivityView v1.16
ProcessActivityView creates a summary of all files and folders that the selected process tries to access. CustomExplorerToolbar of Windows 7 only, which allows you to easily customize the toolbar of Windows 7 only, which allows you to easily customize the toolbar of Windows 7 only, which allows you to easily customize the toolbar of Windows 7 only, which allows you to easily customize the toolbar of Windows 7 only, which allows you to easily customize the toolbar of Windows 7 only, which allows you to easily customize the toolbar of Windows 7 only, which allows you to easily customize the toolbar of Windows 7 only, which allows you to easily customize the toolbar of Windows 7 only, which allows you to easily customize the toolbar of Windows 7 only, which allows you to easily customize the toolbar of Windows 7 only, which allows you to easily customize the toolbar of Windows 7 only, which allows you to easily customize the toolbar of Windows 7 only, which allows you to easily customize the toolbar of Windows 7 only, which allows you to easily customize the toolbar of Windows 7 only, which allows you to easily customize the toolbar of Windows 7 only, which allows you to easily customize the toolbar of Windows 8 only all the toolbar of Windows 8 o
 Paste, Select All, and more. For each MIME type, information about the associated file extension and installed plugin is also displayed. AppReadWriteCounter v1.37 AppReadWrit
following information is displayed: Event Source Name, Event Type, DLL/EXE files containing the event message strings, Registry Modified Time, and version information taken from the DLL/EXE files containing the event message strings, Registry Modified Time, and version information taken from the DLL/EXE files containing the event message strings, Registry Modified Time, and version information taken from the DLL/EXE files containing the event message strings, Registry Modified Time, and version information taken from the DLL/EXE files containing the event message strings, Registry Modified Time, and version information taken from the DLL/EXE files containing the event message strings.
information about ActiveX components installed on your computer. It allows you to installView v1.46 UninstallView v1.46 UninstallView is a tool for Windows that collects information about all programs installed on your system and displays the details of the installed programs in one table. You
can format the saved image filename with the date/time that the image was taken according to your preference, for example: c:\images\img20110725 123256.jpg WebCamImageSave also adds a label with the date/time that the image was taken according to your preference, for example: c:\images\img20110725 123256.jpg WebCamImageSave also adds a label with the date/time that the image was taken according to your preference, for example: c:\images\img20110725 123256.jpg WebCamImageSave also adds a label with the date/time that the image was taken according to your preference, for example: c:\images\img20110725 123256.jpg WebCamImageSave also adds a label with the date/time that the image was taken according to your preference, for example: c:\images\img20110725 123256.jpg WebCamImageSave also adds a label with the date/time that the image was taken according to your preference, for example: c:\images\img20110725 123256.jpg WebCamImageSave also adds a label with the date/time that the image was taken according to your preference, for example: c:\images\img20110725 123256.jpg WebCamImageSave also adds a label with the date/time that the image was taken according to your preference, for example: c:\images\img20110725 123256.jpg WebCamImageSave also adds a label with the date/time that the image was taken according to your preference, for example in the date/time that the image was taken according to your preference, for example in the date/time that the image was taken according to your preference, for example in the date/time that the image was taken according to your preference, for example in the date/time that the image was taken according to your preference, for example in the date/time that the image was taken according to your preference, for example in the date/time that the image was taken according to your preference was ta
the name of the company created the camera, camera model, the date/time that the photograph was taken, Exposure Time, ISO Speed, GPS information (for digital cameras with GPS), and more. This utility allows you to easily view and edit the list of all MuiCache items on your system. For every opened filename, the following information is
displayed: Filename, user name, computer name (On Windows 7/2008 or later), Permissions information (Read/Write/Create), locks count, file owner, file attributes, and more... ImageCacheViewer v1.27 ImageCac
displayed in the Web sites that you recently visited. After retrieving the DNS records for the desired domains, you can save them into text/xml/html/csv file. system and Internet Explorer Web browser. NetworkTrafficView v2.41 NetworkTrafficView is a network monitoring tool that captures the packets pass through your network countersWatch v1.02 NetworkCountersWatch is a tool for Windows that displays system counters for
every network interface on your system. SoundVolumeCommandLine (svcl.exe) is a console application that allows you to do many actions related to sound volume from command-line, including - set sound volume of devices and applications, mute/unmute devices and applications, increase/decrease volume of
devices and applications, set the volume level of specific channel, set the default render/capture device, and more... The main clipboard formats that are stored in the clipboard. It
also displays general drive information, like disk name, partition number, partition number, partition location, and so on. In addition to the standard columns, GACView displays additional information, like modified date, file size, full path of the assembly file, file version, and so on. For example: You can configure Volumouse to use your mouse wheel
for volume control when the Alt key is hold down, when the left mouse button is down, when the mouse cursor is over the taskbar, and so on... Internet Related Utilities DomainHostingView v1.82 Domai
HTML report that can be displayed in any Web browser. In addition to displaying the devices of your local computer, DevManView also allows you view the devices of your network, as long as you have administrator access rights to this computer. This utility displayed in any Web browser. In addition to displaying the devices of your network, as long as you have administrator access rights to this computer. This utility displayed in any Web browser. In addition to displaying the devices of your network, as long as you have administrator access rights to this computer.
to easily jump to the right folder simply by double-clicking the folder item. ProcessThreadsView also allows you to suspend and resume one or more threads. SniffPass can capture the passwords of the following Protocols: POP3, IMAP4, SMTP, FTP, and HTTP (basic authentication passwords). CSVFileView v2.57 CSVFileView is a simple CSV file
viewer/converter utility that allows you to easily view the content of CSV or tab-delimited file created by NirSoft utilities or by any other software, in a simple table viewer. USBDriveLog allows you to retrieve the information from your network, and from external hard drive. WebCacheImageInfo v1.34
WebCacheImageInfo is a simple tool that searches for JPEG images with EXIF information stored in them, like the software that was used to create the image, the camera
model that was used to photograph the image, and the date/time that the image was created. This utility tries to detect the software to hang. For every record found in the Jump Lists, the following information is displayed: The
filename that the user opened, the date/time of the file on the time that the file opening event, the ID of the application that was used to open the file on the time that the file opening event, the ID of the application that was used to open the file on the time that the file on the time that the file on the time that the file opening event, the ID of the application that was used to open the file on the time that the file on the time that the file opening event, the ID of the application that was used to open the file opening event, the ID of the application that was used to open the file opening event, the ID of the file opening event, the ID of the application that was used to open the file opening event, the ID of the application that was used to open the file opening event, the ID of the application that was used to open the file open the file
file, tab-delimited file, XML file, or HTML report. For every DNS query, the following information is displayed: Host Name, Port Number of records, and the content of the returned DNS records. SafariHistoryView v1.01
SafariHistoryView is a simple utility for Windows that reads and parses the history file of Safari Web browser (history.plist) and displays the browsing history in a simple table. WinExplorer v1.30 WinExplorer 
MIME types defined in your system. TaskSchedulerView v1.70 TaskSchedulerView is a simple tool for Windows Vista/7/8/10/11 that displays in a single table the list of all tasks from the Task Scheduler View v1.70 TaskScheduler View v1.70 TaskScheduler of Windows. You can use the generated .reg file to import these changes with RegEdit when it's needed. When this function is called, the debugger
will stop in the beginning of this function. For every file in the list, the following information is displayed: Filename, Extension, Order (The order that the files were opened for every file extension), Open Time (Available only for the last opened file of every file type), File Modified/Created Time, File Size, and File Attributes. ActiveX Compatibility
Manager v1.00 This utility allows you to easily disable/enable ActiveX components on Internet Explorer browser. After the download test is finished, you can easily save the result into Excel and other applications. With SimpleWMIView you can get extensive information about your
system, like a list of running processes, services, drivers, user accounts, hardware, and so on... MyEventViewer v2.25 MyEventViewer is a simple alternative to the standard event viewer of Windows. When application is disabled, it won't be displayed in the 'Other Programs' section of the 'Open With' dialog-box. For each password entry, the following
information is displayed: Origin URL, Action URL, User Name Field, User Name, Password Field, User Nam
any file in your system. This utility simply shows you to list of all symbolic links and junctions in the specified folder, and their target paths. When it finds encrypted data in the Registry, it tries to decrypt the security questions stored on
your current running system (Requires elevation) and it can also decrypt the security questions stored on external hard drive. FavoritesView v1.32 FavoritesView v1.32
in this Web site are compressed in a ZIP file. For each user/email, the following information is displayed: The number of outgoing messages that you sent to the user, the email client software used by this user, and the time
range that you send/received emails with the specified user. AsterWin IE v1.03 This utility reveals the passwords stored behind the asterisks in the web pages of Internet Explorer 5.0 and above. When selecting a DLL file in the upper pane of LoadedDllsView, the lower pane displays the list of all processes that use the selected DLL file. Broken
shortcuts (shortcuts that point to file that doesn't exist) are automatically painted with pink color. TagsReport reads HTML file and displays statistical information about the tags the appears in it. PreviousFilesRecovery v1.10 PreviousFilesRecovery v1.
your local hard drive and find deleted files as well as older versions of existing files. It allows you to easily search files in your system by wildcard, by last modified/created/last accessed time, by file attributes, by file content (text or binary search), and by the file size. It displays a list of all tables available in the opened database file, allows you to
choose the desired table to view, and then when you choose a table, it displays all records found in the selected table. EventLogSourcesView v1.11 Reveals the passwords stored in PCAnywhere items.
ESEDatabaseView v1.68 ESEDatabaseView is a simple utility that reads and displays the data stored inside Extensible Storage Engine (ESE) database (Also known as 'Jet Blue' or .edb file). and retrieve the WHOIS record of the domain. You can use this tool to decrypt DPAPI data on your current running system and to decrypt DPAPI data stored on external hard drive. After the Traceroute is completed, you can select all items (Ctrl+A) and then save them into csv/tab-delimited/html/xml file with 'Save Selected Items' option (Ctrl+S) or
copy them to the clipboard (Ctrl+C) and then paste the result into Excel or other spreadsheet application. You can view the content of these tables in Hex-dump format and export them to a binary file. EDID record provide essential information about your monitor manufacture week/year, monitor monitor model, supported display
modes, and so on... Every browsing history line includes the following information: URL, Web Page Title, Last Visit Time, Visit Count, Redirected To URL, and Record Index. For some of them, additional useful information is displayed: file description, version, product name, company that created the driver file, and more. They are not intended to be
used for illegal purposes. IPNetInfo automatically extracts all IP addresses from the message headers, and displays the information about these IP addresses. You can also select one or more windows and then do some actions on them like close, hide, show, minimize, maximize, disable, enable, and so on... For each URL protocol, the following
information is displayed: The protocol name, the protocol description, the command-line that is executed when you type or click the URL, the protocol description, the command-line that is executed when you type or click the URL, the protocol name, and the company name. By default, PasswordFox displayed: The protocol name, and the command-line that is executed when you type or click the URL, the protocol name, and the command-line that is executed when you type or click the URL, the protocol name, and the command-line that is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed when you type or click the URL is executed w
also allows you to view the fonts as Bold, as Italic or with underline, as well as it allows you to export the fonts list into html file. MACAddressView v1.45 MACAddressView v1.
v1.00 WinDefLogView is a tool for Windows 10 and Windows 10 and Windows Defender on your system. ExifDataView v1.11 ExifDataView is a small utility that reads and displays the Exif data stored inside .jpg
image files generated by digital cameras. The network usage data is collected every hour by Windows operating systems and includes the following information: The name and description of the service or application, the name and SID of the user, the network adapter, and the total number of bytes sent and received by the specified
 service/application. For every IP address, NetworkLatencyView displays up to 10 network latency values, and their average. For each contact, one or more of the following fields are displayed: Skype Name, Full Name, Display Name, Gender, ID, Birthday, Profile Time, Last Used Time, Last Used Time, Phone, Emails, and more... NirCmd v2.86
```

NirCmd is a small command-line utility that allows you to do some useful tasks without displaying any user interface. InstalledCodec v1.30 InstalledCodec v1

```
allows you to open ZIP files and others archive formats. Installed DriversList v1.05 Installed DriversList is a simple tool for Windows that lists all device drivers that are currently installed on your system. BlueScreenView v1.55 BlueScre
 about all crashes in one table. By running NirCmd with simple command-line option, you can write and delete values and keys in the Registry, write values into INI file, dial to your internet account or connect to a VPN network, restart windows or shut down the computer, create shortcut to a file, change the created/modified date of a file, change
your display settings, and more... (for non-text base protocols, like DNS) WifiChannelMonitor v1.70 WifiChannelMonitor captures wifi traffic on the channel you choose, using Microsoft Network Monitor captures wifi traffic on the channel you choose, using Microsoft Network Monitor v1.70 WifiChannelMonitor v1.70 WifiChann
read the wifi history information from a running system, as well as the Credentials data of your currently running system, as well as the Credentials data stored on external hard drive. MobileFileSearch v1.42 MobileFileSearch is a tool for Windows that allows you to search files inside
a mobile device (Smartphone or Tablet) plugged to the USB port on your computer, with Media Transfer Protocol (MTP). You can use the S.M.A.R.T information retrieved by DiskSmartView to find out whether there is any significant problem in your disk drive. FastResolver v1.26 FastResolver v1.26 FastResolver is a small utility that resolves multiple host names into IP
 addresses and vice versa. After the connect/disconnect log lines are accumulated, you can easily export the log lines to comma-delimited/html/xml file. WinLogOnView v1.41 WinLogOnView 
 users logged on and logged off. WebBrowserBookmarksView allows you to load the bookmarks list from your current running system (current logged in user or all user profiles), from remote computer on your network, and from external hard drive. You can easily select one or more computers found by NetBScanner, and then export the list into
 csv/tab-delimited/xml/html file. OutlookAccountsView v1.01 OutlookAccountsView v1.01 OutlookAccountsView v1.13 CurrProcess v1.13 CurrProce

ServiWin v1.71 ServiWin utility displays the list of installed drivers and services on your system. LoadedDllsView v1.05 LoadedDllsView is a simple tool for Windows that scans all running processes
on your system and displays the list of all DLL files loaded by these processes and the number of processes that load each DLL in the list. ChromeCacheView v2.35 ChromeCacheVie
passwords and other secret data stored in the Registry by Microsoft products as well as by 3-party products. Most of the information displayed in the report of WhatIsHang, like Call Stack, Stack Data, Processor Registers, and Memory Data, is designed for users with Windows programming knowledge. After removing the strong name reference, you
can make any change you want in dll/exe file, without getting any exception or error message. HotKeysList is a simple tool for Windows that displays the list of all drives into text/csv/html/xml file. You can also modify some
 properties, like Caption and Visible/Enable. The activity displayed by LastActivityView includes: Running .exe file, Opening open/save dialog-box, Opening file/folder from Explorer or other software installation, system shutdown/start, application or system crash, network connection/disconnection and more... This utility displays the list of all
 folder settings saved by Windows. It also allows you to easily make some actions on multiple channels, set their maximum file size, and clear all events stored in the channels. You can also save the desired
 settings. BluetoothView v1.66 BluetoothView is a small utility that runs in the background, and monitor the activity of Bluetooth devices around you. The information displayed by the report of DomainHostingView includes: the hosting company or data center that hosts the Web server, and domain name server (DNS) of the specified
domain, the created/changed/expire date of the domain, domain owner, domain owner, domain registered the domain, list of all DNS records, and more... ShellMenuView v1.41 ShellMenuView v1
you to easily disable unwanted menu items. You can simply type the list of IP addresses or host name that you want to resolve, or alternatively, you can specify IP addresses range that you want to scan. InstalledAppView also allows you to view the XML files of the Windows app (AppxManifest.xml and AppxBlockMap.xml), uninstall apps, quietly
 uninstall apps, open the install folder of the app, and more... If you need to find a font in non-English characters set of the fonts and to type the characters displayed in the sample text of each font. WebVideoCap v1.41 While watching a video in a Web site, you may sometimes want to
 save the video into your local drive, and then play it offline later. FastResolver is a multithreaded application, so it can resolve dozens of addresses within a few seconds. DriveLetterView v1.50 D
CD/DVD drives, and USB drives - even if they are not currently plugged. BluetoothView can also notify you when a new Bluetooth device is detected, by displaying a small beep sound. AppNetworkCounter v1.49 AppNetworkCounter is a simple tool for Windows that counts and displays the number of TCP/UDF
bytes and packets sent and received by every application on your system. NetBScanner also shows whether a computer is a Master Browser. For each component the following information is displayed: Display Name, Type, Disabled Status, Installed/Modified Time, Description, Company Name, Filename, and more... Clipboardic also allows you to
easily share the clipboard data between multiple computers on your local network. For each user profile, the following information is displayed: Domain\User Name, Profile Path, Last Load Time, Registry File Size, User SID, and more. Visual C++ Source code is included. You can edit the name of the application, or alternatively, you can delete
unwanted MUICache items. Firmware Tables View v1.01 Firmware Tables View v1.01 Firmware Tables (ACPI, SMBIOS) stored on your system. For each cache file, the following information is displayed: Filename, Content Type, URL, Last Accessed Time, Last Modified Time, Expiration Time, Number Of Hits,
File Size, Folder Name, and full path of the cache filename. WifiHistoryView v1.62 WifiHistoryView v1.62 WifiHistoryView v1.70 This utility reads all information from the history file on your computer, and displays the list of all URLs that
 you have visited with Internet Explorer browser in the last few days. SNRemove v1.00 This utility removes the reference to strong name signature from .NET exe and dll files. It automatically connect to the right WHOIS server, according to the top-level domain name, and retrieve the WHOIS record of the domain. It displays the list of all routes on
your current network, including the destination, mask, gateway, interface IP address, metric value, type, protocol, age (in seconds), interface name, and the current version information of the program (product name
product version, company name) if it's available. SocketSniff v1.11 SocketSniff allows you to watch the Windows Sockets (WinSock) activity of the selected process. For each visited Web page, the following information is displayed: URL, Title, Visit Date/Time, Number of visits, number of times that the user typed this address (Typed Count), Referrer
 and Visit ID. SimpleCodeGenerator v1.11 SimpleCodeGenerator v1.11 SimpleCodeGenerator v1.11 SimpleCodeGenerator v1.11 SimpleCodeGenerator v1.10 UserProfilesView v1.10 UserProfilesView
 allow any device with wifi support to access the network and the Internet connection available in your computer. It automatically ping to all hosts every number of seconds that you specify, and displays the number of succeed and failed pings, as well as the average ping time. ShadowCopyView v1.15 ShadowCopyView is simple tool for Windows
 10/8/7/Vista that lists the snapshots of your hard drive created by the 'Volume Shadow Copy' service of Windows 10 that allows you to easily choose the
 default Internet connection that will be used by all Internet applications, when you have more than a single Internet connection on the same time. AppCrashView v1.35 AppCrashView v1.35 AppCrashView v1.35 AppCrashView v1.36 AppCrashView v1.36 AppCrashView v1.37 AppCrashView v1.37 AppCrashView v1.38 AppCrashView v1.38 AppCrashView v1.39 AppCrashView v1.39 AppCrashView v1.39 AppCrashView v1.39 AppCrashView v1.30 AppCrashView v1.30
of multiple computers on your network, if you login to these computers with administrator rights. With MultiMonitors, set the primary monitor, save and load the configuration of all monitors, and move windows from one monitors, set the primary monitor, save and load the configuration of all monitors, and move windows from one monitors, set the primary monitor, save and load the configuration of all monitors, and move windows from one monitors, set the primary monitor is a network monitoring software that displays
the list of all currently opened TCP/IP and UDP ports on your local computer. For each driver, and more. You can easily copy the MD5/SHA1 hashes list into the clipboard, or save them into text/html/xml
file. PingInfoView v2.25 PingInfoView v2.25 PingInfoView is a small utility that allows you to easily ping multiple host names and IP addresses, and watch the result in one table. After scanning and finding the alternate streams list into text/html/csv/xml file.
WinLogOnView also allows you to easily export the logon sessions information to tab-delimited/comma-delimited/comma to add one or more of the following utilities into your Web site, click here See Also: Search in NirSoft Web site: You can also easily jump
to the right utilities section: Password Recovery Utilities Posktop Utilities Outlook/Office Utilities Provided Utilities Provided in the
 following section are for password recovery and educational purposes only. For every client, the following information is displayed: MAC Address, Device Manufacturer, SSID list that the client tries to connect, Sent Data Bytes, Received Data Bytes, Probe Requests Count, and more... DriverView v1.50 DriverView utility displayes the list of all device
drivers currently loaded on your system. WebBrowserBookmarksView v1.05 WebBrowserBookmarksView v1.11 VaultPasswordView v1.11 VaultPasswordView v1.11 VaultPasswordView v1.05 WebBrowserBookmarksView v1.05 WebBrowserBoo
is a simple tool for Windows 10/8/7 that decrypts and displays the passwords and other data stored inside 'Windows Vault'. The latency value calculated by NetworkLatencyView is very similar to the result you get from pinging to the same IP address. When the conditions that you define are not satisfied, your mouse wheel will be used for the regular
 scrolling tasks, exactly as before. For each cookie file, the lower pane of FlashCookiesView displays the content of the file in readable format or as Hex dump. This utility allows you to capture .flv (Flash Video) files and RTSP streams while the Web browser download and play them inside a Web page. SeqDownload v1.26 This utilities allows you to
 automatically download live images from the Web for every xxx seconds/minutes and store the files on your local drive. (DumpEDID is the console version of MonitorInfoView v1.10 OperaPassView v1.10 OperaPass
 password recovery tool that decrypts the content of the Opera Web browser password file (wand.dat) and displays the list of all Web site passwords stored in this file. After finding the files on your Smartphone / Tablet, you can optionally delete them, copy them to a folder on your computer, or export the files list to csv/tab-delimited/html/xml/JSON
 file. AppAudioConfig v1.16 Starting from Windows Vista, you are allowed to change the sound volume of every application, the last settings are saved in the Registry under HKEY CURRENT USER\Software\Microsoft\Internet Explorer\LowRegistry\Audio\PolicyConfig\PropertyStore so in the next times are saved in the Registry under HKEY CURRENT USER\Software\Microsoft\Internet Explorer\LowRegistry\Audio\PolicyConfig\PropertyStore so in the next times are saved in the Registry under HKEY CURRENT USER\Software\Microsoft\Internet Explorer\LowRegistry\Audio\PolicyConfig\PropertyStore so in the next times are saved in the Registry under HKEY CURRENT USER\Software\Microsoft\Internet Explorer\LowRegistry\Audio\PolicyConfig\PropertyStore so in the next times are saved in the Registry under HKEY CURRENT USER\Software\Microsoft\Internet Explorer\LowRegistry\Audio\PolicyConfig\PropertyStore so in the next times are saved in the Registry under HKEY CURRENT USER\Software\Microsoft\Internet Explorer\LowRegistry\Audio\PolicyConfig\PropertyStore so in the next times are saved in the Registry under HKEY CURRENT USER\Notation are saved in the Registry under HKEY CURRENT USER\Notation are saved in the Registry under HKEY CURRENT USER\Notation are saved in the Registry under HKEY CURRENT USER\Notation are saved in the Registry under HKEY CURRENT USER\Notation are saved in the Registry under HKEY CURRENT USER\Notation are saved in the Registry under HKEY CURRENT USER\Notation are saved in the Registry under HKEY CURRENT USER\Notation are saved in the Registry under HKEY CURRENT USER\Notation are saved in the Registry under HKEY CURRENT USER\Notation are saved in the Registry under HKEY CURRENT USER\Notation are saved under HKEY CURRENT USER\Notat
you run the application, your last settings are used. AdapterWatch v1.05 AdapterWatch v1.05 AdapterWatch displays useful information about your network adapters: IP addresses, Hardware address, WINS servers, MTU value, Number of bytes received or sent, The current transfer speed, and more. RegistryChangesView v1.28 RegistryChangesView is a
tool for Windows that allows you to take a snapshot of Windows Registry and later compare it with another Registry snapshots, with the current Registry or with Registry or with Registry files stored in a shadow copy created by Windows. For each file type, the following information is displayed: Type Name, Description, MIME Type, Perceived Type, Flags, Browser
Flags, and more. You select one or more of these bookmarks, and then copy them to tab-delimited text file, HTML file, or XML file. You can use this utility to install all other utilities in this Web site. For example, you can set the System. AppUserModel. ID
property of a window in order to disable the taskbar grouping of the specified window. You can use FolderChangesView with any local disk drive or with a remote network share, as long as you have read permission to the selected folder. AppCrashView also allows you to easily save the crashes list to text/csv/html/xml file. ManageWirelessNetworks
 v1.06 ManageWirelessNetworks is an alternative tool to the standard 'Manage Wireless Networks' of Windows (or 'Manage Known Networks' of Windows 10). Access PassView v1.12 This utility reveals the database password of every pass
can be very useful if you forgot your Access Database password and you want to recover it. It can recover 2 of password stored for the all users. WinUpdatesView v1.17 - Windows Updates History Viewer WinUpdatesView is a simple tool that
displays the history of Windows updates on your system. it displays the list of all cookies stored by Google Chrome Web browser, and allows you to easily delete unwanted cookies. As oppose to Windows event viewer, MyEventViewer allows you to easily delete unwanted cookies.
 window, instead of opening a new one. It automatically scans the entire cache of Internet Explorer and Mozilla-based Web browsers (Including Firefox) and finds all video files to another folder, or copy the URLs list to the clipboard. you
can save the list of UserAssist entries into text/html/xml/csv file, as well as you can delete unwanted items. SkypeContactsView v1.05 SkypeContactsVi
 including passwords of common Web browsers, passwords of common email software, dialup/VPN passwords, wireless network credentials, Windows product key, Win
Priority, Base Priority, Context Switch Count, Context Switch Count, Context Switch Change (Since the last refresh), Wait Reason, Process Path. You can select one or more items from the logs list, and then copy them to the clipboard, or export them into text/html/csv/xml file. NK2Edit is a real NK2 editor that allows you to modify all fields in NK2 file, delete
unwanted records, add new records, repair corrupted nk2 files, merge 2 or more NK2 files into a single NK2 files into a single NK2 files allows you to make a very accurate search that cannot be done with Windows search. You can watch the installed software packages information from your local system or from another system on external hard-
drive. MZHistoryView v1.70 MZHistoryView v1.70 MZHistoryView is a small utility that reads the history data file (history data file (history data file (history data file (history data file who Iscane Web browsers, and displays the list of all visited Web pages in the last days. CAM UnZip is a small freeware utility that allows you to easily extract files from any ZIP file. Who Iscane Web browsers, and displays the list of all visited Web pages in the last days.
to detect the computers connected to your network, including ARP, UDP, DHCP, mDNS, and BROWSER. After retrieving the information about the desired IP addresses, You can copy the information to the clipboard, or save it into text/html/xml/csv file. KeyboardStateView v1.00 KeyboardStateView is a simple tool for Windows that displays the
 current state and virtual key code of every key you press. RunFromProcess v1.07 RunFromProcess is a command-line utility that allows you to run a program from another process that you choose. For every task, the following information is displayed: Task Name, Description, Status, Hidden (Yes/No), Last Run/Next Run Times, Task Folder, EXE
 filename or COM handler of the task, number of missed runs, and more... BlueScreenView also mark the drivers that possibly caused the crash. ESEDatabaseView also allows you to easily choose one or more records, and then export them into comma-
 delimited/tab-delimited/html/xml file, or copy the records to the clipboard (Ctrl+C) and then paste them into Excel or other spreadsheet application. WinDefThreatsView v1.12 
Quarantine, Clean, Remove, Block, or No Action) for multiple threats at once. It also allows you to easily modify or delete the compatibility settings of multiple applications at once. BatteryInfoView also provides a log window, which adds a new log line containing the battery status every 30 seconds or any other time interval that you choose. For every
log line created by USBLogView, the following information is displayed: Event Type (Plug/Unplug), Event Time, Device Name, Product ID, Vendor ID, Product ID, Vendor Name, Product Name, and more... MUICacheView v1.01 Each time that you start
 using a new application, Windows operating system automatically extract the application name from the version resource of the exe file, and stores it for using it later, in Registry key known as the 'MuiCache'. For each process, you can view the list of all modules (DLL files) that the process loads into memory. DumpEDID v1.07 DumpEDID is a small
 console application that extract the EDID ("Extended display identification data") records from your computer, analyze it, and dump it into the console window. The search Text, Search Time, Web Browser, and the search URL. For each contact,
 LiveContactsView display the following fields: Email address, nickname, quick name, last name, and more. You can use it for recovering a lost web site password, if it's stored on your computer. You can easily select one or more attachments and save all of them into the desired folder, as well as you can delete unwanted large attachments
that take too much disk space in your mailbox. QuickSetDNS v1.31 QuickSetDNS is a simple tool that allows you to easily change the DNS servers that are used for your Internet connection. OfflineRegistryFinder v1.11 offlineRegi
 keys/values/data according to the search criteria you define. BrowserDownloadsView v1.41 BrowserDownlo
 without displaying any user interface. Later, when your computers are turned off or in standby mode, you can use the stored computers with a single click. For each port in the list, information about the process that opened the port is also displayed, including
the process name, full path of the process, version information of the process (product name, file description, and so on), the time that the process was created, and the user that created it. This utility can be very useful for finding the origin of unsolicited mail. IPNetInfo v1.95 IPNetInfo is a small utility that allows you to easily find all available
 information about an IP address: The owner of the IP address, the country/state name, IP addresses range, contact information (address, phone, fax, and email), and more. SafariHistoryView allows you to easily export the browsing history data into text/csv/html/xml file, or copy the data to the clipboard and then paste it into Excel. It displays
 extensive information about every wireless profile on your system, even if the network adapter is not active. You can scan the folders of your local drives, and network resources on a remote computer. This utility also allows you to easily enable/disable the URL protocols. WebCamImageSave v1.11 WebCamImageSave is simple
WebCam capture utility that allows you to easily capture a still image from your camera every number of seconds that you choose, and save it into image file (.jpg, .png, .bmp) on your disk. If you lost one of these password/keys, but you still have a backup file of your router configuration, RouterPassView might help you to recover your lost password
from your router file. Network Password Recovery v1.56 When you connect to a network share on your LAN or to your onnect to a network share on your to save your password in order to use it in each time that you connect the remote server. By looking in these files, you can learn which files every application is using,
 and which files are loaded on Windows boot. For each Bluetooth device, the following information is displayed: MAC Address, Name, Major Device Type, and optionally the company name of the device (if external file of MAC addresses - oui.txt is provided) RegFileExport v1.11 RegFileExport v1.11 RegFileExport is a small console application that
 allows you to easily extract data from offline Registry file located on another disk drive. NetworkLatencyView v1.66 NetworkLatencyView is a simple tool for Windows that listens to the TCP connection detected on your system. Every line in the main
table of LiveTcpUdpWatch displays the protocol (TCP/UDP/IPv4/IPv6), local/remote IP address, local/remote port, number of sent/received bytes, number of se
of all IP addresses that you scan. After OfflineRegistryFinder displays the search result, you can easily select one or more items and then export them into a .reg file that can be used to import in the RegEdit tool of Windows. It also allows you to easily disable/enable mutiple tasks at once. You can use it on your currently running instance of Windows,
as well as you can use it on external instance of Windows in another drive. For each IP address, the following information is displayed: IP block range, Organization (RIPE, ARIN, APNIC, LACNIC or AFRINIC), Assigned Date, Country Name, and Country
 Windows operating system. FileTypesMan also allows you to easily edit the properties and flags of each file type, as well as it allows you to add, edit, and remove actions in a file type. SecurityQuestionsView v1.00 SecurityQuestionsView by
  Windows 10 operating system. Content Advisor Password Remover v1.01 Removes the Content Advisor password in Internet Explorer (versions 4.x and above). For every log line, the following information is displayed: Even Time, Event Type (Open, Close, Listen), Local Address, Remote Address, Remote Host Name, Local Port, Remote Port, Process
ID, Process Name, and the country information of the Remote IP (Requires to download IP to country file separately.) ProcessTCPSummary v1.16 ProcessTCPSummary v1.16 ProcessTCPSummary v1.16 ProcessTCPSummary v1.16 ProcessTCPSummary v1.17 ProcessTCPSummary v1.16 ProcessTCPSummary v1.18 ProcessTCPSummary v1.19 ProcessTC
the text that appears when the mouse cursor moves over the folder. It allows you to view the events of your local computer, events of a remote computer on your network, and events stored in .evtx files. For each crash, BlueScreenView displayed in the blue screen
(Bug Check Code and 4 parameters), and the details of the driver or module that possibly caused the crash (filename, product name, file description, and file version). Winsock Services View v1.00 This utility displays the details of all Winsock Services View v1.00 This utility displays the details of all Winsock Services View v1.00 This utility displays the details of all Winsock Services View v1.00 This utility displays the details of all Winsock Services View v1.00 This utility displays the details of all Winsock Services View v1.00 This utility displays the details of all Winsock Services View v1.00 This utility displays the details of all Winsock Services View v1.00 This utility displays the details of all Winsock Services View v1.00 This utility displays the details of all Winsock Services View v1.00 This utility displays the details of all Winsock Services View v1.00 This utility displays the details of all Winsock Services View v1.00 This utility displays the details of all Winsock Services View v1.00 This utility displays the details of all Winsock Services View v1.00 This utility displays the details of all Winsock Services View v1.00 This utility displays the details of all Winsock Services View v1.00 This utility displays the details of all Winsock Services View v1.00 This utility displays the details of all Winsock Services View v1.00 This utility displays the details of all Winsock Services View v1.00 This utility displays the details of all Winsock Services View v1.00 This utility displays the details of all Winsock Services View v1.00 This utility displays the details of all Winsock Services View v1.00 This utility displays View v1.00 This utility displays View v1.00 This utility v1.00 This utility
you to easily find all available information about an IP address; The owner of the IP address, phone, fax, and email), and more. While capturing the Web site files, the main window of WebSiteSniffer displays general statistics about the downloaded files for every Web site / host
name, including the total size of all files (compressed and uncompressed) and total number of files for every file type (HTML, Text, Images, and so on) SiteShoter v1.42 - Capture Website Screenshots SiteShoter v1.42 - Capture Website Screenshot v1.42 - 
folders from the date that the snapshot was created, you can browse the older version of your files and folders, and optionally copy them into a folder on your disk. For each call to a device driver, the following information is displayed: Handle, Control Code, number of input bytes, number of output bytes, the name of the device handle, and all the
input/output bytes, displayed as Hex dump. If you run ProcessTCPSummary as Administrator, you can also watch the number of TCP/UDP bytes sent and received by every process as well as the current send/receive speed. OfflineRegistryFinder can also be used for Registry scan of your running operating system. You can use this tool on your local
computer and also on remote computer, as long as you have permission to access WMI on the remote machine. You can run multiple applications simultaneously, each application works with different date and time, while the real date/time of your system continues to run normally. The information is extracted from the EDID ("Extended display
identification data") records stored on your computer. Volumouse v2.03 Volumouse provides you a quick and easy way to control the sound volume on your system - simply by rolling the wheel mouse. It uses a compressed IP addresses database that is stored inside the exe file. Advanced Run: This option is available in the context menu
when you right-click on an executable file (*.EXE). WinUpdatesView can load the Windows updates history from your local system, using API, and it can also read and parse the Windows updates database file (DataStore.edb) from external drive or from remote computer on your network. For each cache file, the following information is displayed: URL
Content type, File size, Last modified time, Expiration t
and devices currently connected to your network. This utility can be useful if your 'Open With' window displays too much applications, and you want to remove the applications that you don't use frequently. The program that you don't use frequently. The program that you run will be executed as a child of the specified process and it'll run with the same user and security context of the specified
parent process. After collecting a fair amount of images, you can easily create nice animation from the downloaded images. You can extract the Outlook accounts information of the current user, from external disk plugged to your computer, and from remote computer on your network. WebVideoCap can capture the video files of most popular video-
 sharing sites, including YouTube, Google Video, Yahoo Video, iFilm, Metacafe, Putfile, and more... For Example: You can search all files created in the last 10 minutes with size between 500 and 700 bytes. The security information of every stored password includes the total number of characters, number of numeric characters, number of
lowercase/uppercase characters, number of repeating characters, and password strength. FileActivityWatch v1.66 FileActivityWatch is a tool for Windows that displays information about every read/write/delete operation of files occurs on your system. You can also select one or more DLL files and then export the list into comma-delimited/tab-
delimited/html/xml file. WhoisThisDomain v2.46 This utility allows you to easily get information about IP addresses, without connecting any external server
WirelessNetView v1.75 WirelessNetView is a small utility that runs in the background, and monitor the activity of wireless networks around you. After BrowserDownloads list, you can select one or more downloads and then export them to comma-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-delimited/tab-
MD5/SHA1/SHA256/SHA512 hash of the downloaded files. TurnFlash v1.00 (command-line version) small command-line utility that allows you to eaily disable and enable the Macromedia Flash player component in Internet Explorer. ShellBagsView v1.30 Each time that you open a folder in Explorer, Windows automatically save the settings of this
folder into the Registry. OpenedFilesView v1.86 OpenedFilesView v1.86 OpenedFilesView v1.85 CretsView v1.25 LSASecretsView v1.97 ProduKey is a small utility that displays the ProductID and the CD-Key of MS
Office, Windows, and SQL Server installed on your computer. For some of the programs, the last time execution time of the program is also displayed. For hotfix updated with these hotfixes. For every network interface found on your system, the following information is displayed (if it's stored in the
Registry): Device Name, Connection Name, IP Address, Subnet Mask, Default Gateway, DHCP Server, Status, MAC Address and more... Searching in the Registry of running system. Both login information and the protection passwords are revealed instantly. All Threads View v1.00
AllThreadsView is a simple tool for Windows that displays a list of all running threads from all processes on your system in one table. Browsing history from external hard drive. RTMPDumpHelper v1.22 RTMPDumpHelper is a
small utility that can help you to easily download RTMP video/audio streams. You can easily select one or more log records and then export them into csv/tab-delimited/xml/html file.
