Or it could be a depreciation report. If you don't see the rumors, ask. Accounting numbers rarely appear by themselves randomly. Usually they are in column format with descriptions of the lines, which are located in the left side of the report. You can find the meaning about accounting numbers by looking at description labels, such as account names or vendor names or customer names. The descriptions usually define which accounting numbers you are looking at. Be aware that some numbers are a summary of several other numbers. Pay attention to the descriptions of the columns, if available. They usually give structure to numbers. Accounting numbers help make sound decisions based on real data and not just a feeling. Looking at the accounting numbers you can easily see old accounts that can be collected, for example. Without accounting data, you cannot know who has what and how long. These numbers are practical and valuable for any company. When reviewing accounting numbers and accounting reports, keep these issues in mind: 1.) The dates and times of the reports are very important. You need to know if you are looking at annual amounts or monthly figures. 2.) Be aware that accounting numbers can be wrong. If you know that your supplies cost work on average \$200 per month and see \$40 as spending in a month, then there is a chance of an error. 3.) The accounting numbers reflect how the company is going, but it may not give you a complete picture. Accounting cannot quantify employee morale or Company reputation.
