You can download any content (videos, photos, videos, stories, IGTV) from Instagram without any functional limitation. Please check your phone's download folder or your browser's download history. SaveFrom Instagram Video Downloader allows you to download images and videos from Instagram online. This is a really simple downloader that works great with any browser on PC or mobile. With it, you can save Reels videos and download Instagram images in high quality and unlimited for free. For your convenience, we have also developed an IG video downloader extension for PC browsers and a very smart application for all Android users. See below for details. For users who want to download Instagram photos and videos directly from this social media platform, we have developed the IG Downloader browser extension that you just need to add to your browser. Once added, the browser extension will appear as a small button when you hover over an Instagram video or image you want to save. Click the "Save" button to get the photo or video file from Insta to your device quickly and in the highest quality available. This is a great video and image downloader extension for browsers like Chrome, Firefox, Opera, Safari and all Chromium-based browsers that works with desktop browsers on Windows, Mac OS, Linux and Ubuntu. The main feature is the ability to download private videos and Instagram photos of IG users whose posts you can view. Regarding the restricted content, please note that you cannot use IG online downloader (SaveFrom.net), but you can use this extension freely. Add SaveFrom.net Helper extension to your browser: Install one-click IG or IGTV video downloader. Watch videos offline. Never be bored.media gallery to collect music and videos. Manage your files. Get rid of the chaos. Listen to music. Favorite songs on the go. Share videos with friends. 1. Copy the link to the video or photo. Open the page of the video, Instagram Reels, IGTV or photo you want to save, copy the URL and go back to the SaveFrom download page. 2. Paste the URL into the input field Paste the URL of the video or photo into the input field at the top of the Insta Video Downloader page and click the button on the right to start the download process. 3. Click the download button. Note that the best quality is selected by default. However, if you need a certain quality or format, there are several options to choose from. A simple and quick way to start the download process directly from your browser's address bar is with a short domain that needs to be added before the video or photo URL. (e.g. "sfrom.net/â or "savefrom.net/â). Example: sfrom.net/ After pressing Enter you will be taken to a page with several download options. By default, the best available video or photo quality is selected. If you need a quality other than the default, select it and click to perform the action. This feature is only available for the SaveFrom.net Helper browser extension. None of the IG video downloaders can save private videos and photos without access to your account. You use your personal account to log into a social network and download videos and photos. As account access is against our user privacy and data protection philosophy, we will never add this option. To download Instagram videos from a private account or private photos from IG, you need to install the SaveFrom.net Helper browser extension. You can only download IG videos to iPhone with online Insta Saver. Works fine on iOS 13 and above. Go to IGon your iPhone or iPad and copy the link to share the video or photo. Return to the browser where you want to open SaveFrom.net. Paste the link in the Instagram video download input field and press the right button of the field. After a few seconds you will receive a download link. You can use any of the three methods above: Install a browser extension; use the short domain âsfrom.net/â; or use online instagram downloader. Our disc downloader saves videos and images to the default folder on your Mac. After you download an Instagram video or photo, the file will be in a folder that is set to store all content from the site by default. If you haven't made any other settings, the default folder is called "Downloads". Any files downloaded directly from social media platform servers. We do not store photos or videos. No! This is against our philosophy of user privacy. We respect the privacy of our users. Yes! And our video downloader is still free for everyone. We love helping people, and to keep Insta Video Downloader going, we make our advertisers pay to support this service. SaveFrom Video Downloader Instagram searches and displays all possible options, which means it's the highest quality source file possible. If the requested quality is not available for this video, it means that the file is only available in that quality and there are no other options. Default quality is usually MP4 format and 720p resolution for videos. There are several ways to successfully download an APK file. The second method is to use SaveFrom.net and the third method is to use the short domain "sfrom.net"/. Download the APK file. The second method is to use SaveFrom.net and the third method is to use the short domain "sfrom.net"/. âsfrom.net/â.
