White blood cell labelled

White blood cell image labelled. White blood cell ingesting a bacterium labelled diagram. White blood cell labelled diagram. Draw a well labelled diagram of white blood cell. Parts of a white blood cell labelled. Indium-labelled white blood cell scan. Labelled white blood cell scan. Well labelled diagram of white blood cell.

The white blood cells, also known as leukocytes, are the part of the serum that constitutes the immune system and protects from foreign diseases and invaders. There are five types of white blood cells: neutrophils, lymphocytes, eosinophils, monocytes and basophils. Each type of white globule has a unique function. For example, neutrophils help free the body of bacteria and mushrooms, while basophils fight inflammation. A normal white globule cellulose counts for an adult between 3,500 and 10,500 blood cells for microliter (MCL) of blood. The symptoms of a low number of white blood cells include general fatigue, body pain, fever, chills and headaches. With a low number of white blood cells, cuts and bruises it may not heal the fastest and most likely be infected. Conversely, high levels of white blood cells are generally asymptomatic. CGToolBox / Getty Images A number of low low blood blood cells can be caused by many things. Some medical treatments, such as chemotherapy, cause the blood number of white blood. Diseases such as HIV / AIDS that weaken the immune system are also characterized by a low number of white blood cells. RIDOFRANZ / GETTY Images In most cases, people do not need to worry about having a high number of white blood cells. It means that your body is extra specialized at combat disease. However, occasionally a high number of white blood cells can be a sign of the body that attaches itself, as happens with car immune diseases such as rheumatoid arthritis, lupus and psoriasis. HORILLAZ / Getty Images All white blood cells carry out three main functions. First of all, they decide bacteria, mushrooms and viruses that cause diseases. Secondly, they destroy these threats to the body and they are built from the body. Finally, the white blood cells produce protein à €
